CPC COOPERATIVE PATENT CLASSIFICATION

F MECHANICAL ENGINEERING; LIGHTING; HEATING; WEAPONS; BLASTING (NOTE omitted)

ENGINES OR PUMPS

F01 MACHINES OR ENGINES IN GENERAL; ENGINE PLANTS IN GENERAL; STEAM ENGINES

F01D NON-POSITIVE DISPLACEMENT MACHINES OR ENGINES, e.g. STEAM TURBINES (machines or engines for liquids <u>F03</u>; non-positive displacement pumps <u>F04D</u>)

NOTES

- 1. This subclass covers:
 - non-positive-displacement engines for elastic fluids, e.g. steam turbines;
 - non-positive-displacement engines for liquids and elastic fluids;
 - non-positive-displacement machines for elastic fluids;
 - non-positive-displacement machines for liquids and elastic fluids.
- 2. Attention is drawn to the Notes preceding class <u>F01</u>, especially as regards the definitions of "reaction type", e.g. with airfoil-like blades, and "impulse type", e.g. bucket turbines.

WARNING

In this subclass non-limiting references (in the sense of paragraph 39 of the Guide to the IPC) may still be displayed in the scheme.

1/00	Non-positive-displacement machines or engines, e.g. steam turbines (wit working-fluid flows in	1/16	characterised by having both reaction stages and impulse stages
	opposite axial directions for balancing axial thrust F01D 3/02; with other than pure rotation F01D 23/00; turbines characterised by their use in special steam systems, cycles, or processes, regulating devices	1/18	• without stationary working-fluid guiding means; (F01D 1/24, F01D 1/32, F01D 1/34 take precedence; {with pressure-velocity transformation exclusively in rotor F01D 1/32})
	therefor <u>F01K</u>)	1/20	• traversed by the working-fluid substantially
1/02	 with stationary working-fluid guiding means and 		axially
	bladed or like rotor, {e.g. multi-bladed impulse steam turbines}(F01D 1/24 takes precedence;	1/22	 traversed by the working-fluid substantially radially
1/023	without stationary working-fluid guiding means F01D 1/18) • {the working-fluid being divided into several}	1/24	 characterised by counter-rotating rotors subjected to same working fluid stream without intermediate stator blades or the like
	separate flows (<u>F01D 3/02</u> takes precedence); several separate fluid flows being united in	1/26	 traversed by the working-fluid substantially axially
	a single flow; the machine or engine having provision for two or more different possible fluid	1/28	 traversed by the working-fluid substantially radially
1/026	flow paths} • {Impact turbines with buckets, i.e. impulse turbines, e.g. Pelton turbines (<u>F01D 1/16</u> , <u>F01D 1/34</u> take precedence)}	1/30	 characterised by having a single rotor operable in either direction of rotation, e.g. by reversing of blades (combinations of machines or engines F01D 13/00)
1/04	 traversed by the working-fluid substantially axially 	1/32	with pressure velocity transformation exclusively in rotor, e.g. the rotor rotating under the influence
1/06	 traversed by the working-fluid substantially radially 		of jets issuing from the rotor, {e.g. Heron turbines (the working fluid being a combustion products
1/08	having inward flow		<u>F02C 3/165</u> ; jet propulsion plants <u>per se</u> <u>F02K</u>)}
1/10	 having two or more stages subjected to working- fluid flow without essential intermediate pressure change, i.e. with velocity stages (F01D 1/12 takes precedence) 	1/34	 characterised by non-bladed rotor, e.g. with drilled holes (<u>F01D 1/32</u> takes precedence; sirens <u>G10K 7/00</u> {; impact turbines with buckets <u>F01D 1/026</u>; hand-held tools with a non-bladed
1/12	with repeated action on same blade ring		rotor <u>F01D 15/067</u> })
1/14	traversed by the working-fluid substantially	1/36	using fluid friction
	radially	1/38	• of the screw type

3/00	Machines or engines with axial-thrust balancing	5/088	• • • {in a closed cavity}
3/02	effected by working-fluidcharacterised by having one fluid flow in one axial	5/10	 Anti- vibration means {(specially adapted for radial flow machines or engines <u>F01D 5/04</u>)}
3/02	direction and another fluid flow in the opposite	5/12	 Blades ({specially adapted for radial flow machines
	direction and another rand now in the opposite	3/12	or engines F01D 5/04}; blade roots F01D 5/30;
3/025	• • {with a centrally disposed radial stage}		rotors with blades adjustable in operation
3/04	 axial thrust being compensated by thrust-balancing 		F01D 7/00; stator blades F01D 9/02)
2,0.	dummy piston or the like	5/14	Form or construction (selecting particular)
= 10.0			materials, measures against erosion or corrosion
5/00	Blades; Blade-carrying members (nozzle boxes		<u>F01D 5/28</u>)
	F01D 9/02); Heating, heat-insulating, cooling or	5/141	• • • {Shape, i.e. outer, aerodynamic form
	antivibration means on the blades or the members {(special arrangements in rotors dealing with breaking		(<u>F01D 5/148</u> - <u>F01D 5/20</u> take precedence;
	off of part thereof <u>F01D 21/045</u>)}		blade construction <u>F01D 5/147</u>)}
5/005	• {Repairing methods or devices}	5/142	• • • • {of the blades of successive rotor or stator
5/02	 Blade-carrying members, e.g. rotors (rotors of 	5 /1 AO	blade-rows}
e, 0 2	non-bladed type <u>F01D 1/34</u> ; stators <u>F01D 9/00</u> {;	5/143	{Contour of the outer or inner working
	selecting particular materials F01D 5/28})		fluid flow path wall, i.e. shroud or hub contour}
5/021	• • {for flow machines or engines with only one axial	5/145	• • • • {Means for influencing boundary layers
	stage (for more than one stage <u>F01D 5/06</u>)}	3/143	or secondary circulations (for compressors
5/022	• • {with concentric rows of axial blades}		F04D 29/68)}
5/023	• • {of the screw type}	5/146	• • • • {of blades with tandem configuration, split
5/025	• • {Fixing blade carrying members on shafts		blades or slotted blades}
	(attachment of a member on a shaft in general	5/147	• • • {Construction, i.e. structural features, e.g. of
	F16D 1/06; for non-positive displacement pumps F04D 29/00)}		weight-saving hollow blades (F01D 5/148,
5/026	• • {Shaft to shaft connections}		<u>F01D 5/16</u> and <u>F01D 5/20</u> take precedence;
5/020	 (Shart to shart connections) (Arrangements for balancing (for balancing) 		blade shape <u>F01D 5/141</u> ; blades with cooling
3/02/	rotating bodies in general F16F 15/32; for		or heating channels or cavities <u>F01D 5/18</u> ; heating, heat-insulating or cooling means on
	compensating unbalance G01M 1/36)}		blades F01D 5/18)}
5/028	• • {the rotor disc being formed of sheet laminae	5/148	• • • {Blades with variable camber, e.g. by ejection
	(rotor blade aggregates of unitary construction		of fluid}
	<u>F01D 5/34</u>)}	5/16	for counteracting blade vibration
5/03	Annular blade-carrying members having blades	5/18	Hollow blades, {i.e. blades with cooling
	on the inner periphery of the annulus and		or heating channels or cavities (structure
5/04	extending inwardly radially, i.e. inverted rotors • for radial-flow machines or engines		of hollow blades in general <u>F01D 5/147</u>)};
5/041	{of the Ljungström type}		Heating, heat-insulating or cooling means on blades
5/043	• • • (of the Ejungstrom type) • • • (of the axial inlet- radial outlet, or <u>vice versa</u> ,	5/181	{Blades having a closed internal cavity
3/013	type}	3/101	containing a cooling medium, e.g. sodium}
5/045	{the wheel comprising two adjacent bladed	5/182	{Transpiration cooling}
	wheel portions, e.g. with interengaging	5/183	{Blade walls being porous}
	blades for damping vibrations}	5/184	{Blade walls being made of perforated
5/046	• • • • {Heating, heat insulation or cooling means}		sheet laminae}
5/048	• • • {Form or construction}	5/185	• • • • {Liquid cooling (<u>F01D 5/181</u> takes
5/06	. Rotors for more than one axial stage, e.g. of drum		precedence)}
	or multiple disc type; Details thereof, e.g. shafts,	5/186	• • • • {Film cooling (<u>F01D 5/187</u> takes
	shaft connections {(<u>F01D 5/022</u> , <u>F01D 5/023</u> take precedence)}	5 /1 O 5	precedence)}
5/063	• • • {Welded rotors (welding per se B23K)}	5/187	{Convection cooling}
5/066	• • • { Wedged Fotors (wedging per se B25K)} • • • { Connecting means for joining rotor-discs or	5/188	• • • • { with an insert in the blade cavity to guide the cooling fluid, e.g. forming a separation
3/000	rotor-elements together, e.g. by a central bolt,		wall}
	by clamps}	5/189	• • • • • { the insert having a tubular cross-
5/08	Heating, heat-insulating or cooling means	0,10,	section, e.g. airfoil shape}
	{(specially adapted for radial flow machines or	5/20	Specially-shaped blade tips to seal space
	engines <u>F01D 5/04</u>)}		between tips and stator {(F01D 5/225 takes
5/081	• • • {Cooling fluid being directed on the side of		precedence)}
	the rotor disc or at the roots of the blades	5/22	Blade-to-blade connections, {e.g. for damping
F 1005	$(\underline{F01D} 5/087 \text{ takes precedence})$		vibrations}
5/082	• • • {on the side of the rotor disc}	5/225	• • · {by shrouding}
5/084	• • • { the fluid circulating at the periphery of a multistage rotor, e.g. of drum type }	5/24	using wire or the like
5/085	{cooling fluid circulating inside the rotor}	5/26	Antivibration means not restricted to blade form
5/083 5/087	• • • {cooling find circulating fistale the rotor} • • • • {in the radial passages of the rotor disc}		or construction or to blade-to-blade connections
5/00/	• • • • [III the radial passages of the rotol tilse]		{or to the use of particular materials}

5/28	• • Selecting particular materials; {Particular measures relating thereto;} Measures against erosion or corrosion	9/065	• • {Fluid supply or removal conduits traversing the working fluid flow, e.g. for lubrication-, cooling-, or sealing fluids (see also F01D 25/16,
5/282	• • • {Selecting composite materials, e.g. blades with reinforcing filaments}		F01D 25/24 and F01D 25/26)}
5/284	• • {Selection of ceramic materials}	11/00	Preventing or minimising internal leakage of
5/286	 • • {Particular treatment of blades, e.g. to increase durability or resistance against corrosion or erosion (F01D 5/288 takes precedence)} 		working-fluid, e.g. between stages (sealings in general F16J {; sealing arrangements for transition ducts of combustor cans F01D 9/023})
