## CPC COOPERATIVE PATENT CLASSIFICATION

### B PERFORMING OPERATIONS; TRANSPORTING

(NOTES omitted)

### **SHAPING**

WORKING OF PLASTICS; WORKING OF SUBSTANCES IN A PLASTIC STATE IN GENERAL

(NOTES omitted)

# B29K INDEXING SCHEME ASSOCIATED WITH SUBCLASSES <u>B29B</u>, <u>B29C</u> OR <u>B29D</u>, RELATING TO MOULDING MATERIALS OR TO MATERIALS FOR {MOULDS, } REINFORCEMENTS, FILLERS OR PREFORMED PARTS, e.g. INSERTS

#### NOTES

- 1. This subclass constitutes an indexing scheme associated with subclasses <u>B29B</u>, <u>B29C</u> or <u>B29D</u>.
- 2. In this subclass, the following term is used with the meaning indicated: "rubber" covers: natural or conjugated diene rubbers; rubber in general (for a specific rubber, other than a natural rubber or a conjugated diene rubber, see the group provided for such macromolecular compounds)
- 3. Documents relating to compositions or properties of the materials to be shaped, said compositions having a particular influence on the shaping technique, should be classified in the shaping technique, e.g. <u>B29C 39/003</u>, <u>B29C 41/003</u>, <u>B29C 43/003</u>, <u>B29C 45/0001</u>, <u>B29C 48/022</u>, <u>B29C 49/0005</u>, <u>B29C 51/002</u>, <u>B29C 53/005</u>, <u>B29C 55/005</u>, <u>B29C 61/003</u> and <u>B29C 63/0017</u>. Copolymers are indexed with the same indexing code as the majority polymers
- 4. Copolymers are indexed with the same indexing code as the majority polymers
- 5. Compositions for moulding materials, condition, form or state of moulded material: B29K 2001/00 B29K 2105/00
- 6. Compositions for reinforcements: <u>B29K 2201/00</u> <u>B29K 2313/00</u>
- 7. Compositions for fillers: <u>B29K 2401/00</u> <u>B29K 2511/00</u>
- 8. Compositions for preformed parts: <u>B29K 2601/00</u> <u>B29K 2713/00</u>
- 9. Compositions for moulds: <u>B29K 2801/00</u> <u>B29K 2913/00</u>

10. Properties of moulding materials, reinforcements, fillers, preformed parts or moulds: B29K 2995/00

### **WARNING**

The following IPC groups are not in the CPC scheme. The subject matter for these IPC groups is classified in the following CPC groups:

| 8F          |            |                                    |
|-------------|------------|------------------------------------|
| B29K 105/22 | covered by | B29K 2705/00                       |
| B29K 105/28 | covered by | B29K 2995/0025                     |
| B29K 105/30 | covered by | B29K 2995/003                      |
| B29K 105/32 | covered by | B29K 2995/0026                     |
| B29K 105/34 | covered by | B29K 2995/002, B29K 2995/0007, and |
|             | •          | B29K 2995/0015                     |
|             |            |                                    |

| 2001/00 | Use of cellulose, modified cellulose or cellulose                  |
|---------|--------------------------------------------------------------------|
|         | derivatives, e.g. viscose, as moulding material                    |
| 2001/08 | • {Cellulose derivatives}                                          |
| 2001/12 | • • {Cellulose acetate}                                            |
| 2001/14 | • • {Cellulose acetate-butyrate}                                   |
| 2001/18 | {Cellulose nitrate}                                                |
| 2003/00 | Use of starch or derivatives as moulding material                  |
| 2005/00 | Use of polysaccharides or derivatives as moulding material         |
| 2007/00 | Use of natural rubber as moulding material                         |
|         | · ·                                                                |
| 2009/00 | Use of rubber derived from conjugated dienes, as                   |
| 2009/00 | Use of rubber derived from conjugated dienes, as moulding material |

| 2011/00   | Use of rubber derived from chloroprene as moulding material                                                                            |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------|
| 2019/00   | Use of rubber not provided for in a single one of main groups $\{\frac{B29K}{2007/00} - \frac{B29K}{2011/00}, \}$ as moulding material |
| 2021/00   | Use of unspecified rubbers as moulding material                                                                                        |
| 2021/003  | • {Thermoplastic elastomers}                                                                                                           |
| 2021/006  | • {Thermosetting elastomers}                                                                                                           |
| 2023/00   | Use of polyalkenes {or derivatives thereof} as moulding material                                                                       |
| 2023/04   | • {Polymers of ethylene}                                                                                                               |
| 2023/06   | • {PE, i.e. polyethylene}                                                                                                              |
| 2023/0608 | {characterised by its density}                                                                                                         |
| 2023/0616 | {VLDPE, i.e. very low density polyethylene}                                                                                            |
| 2023/0625 | • • • {LLDPE, i.e. linear low density polyethylene}                                                                                    |

| 2023/0633                                           | {LDPE, i.e. low density polyethylene}                                                                                                                                                                                                                                                                                                                                                                                                                     | 2033/12                                                                              | • • {Polymers of methacrylic acid esters, e.g.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
